May 2025

Greetings to all.

The crew here at CTDM sincerely prays that you are having a beautiful spring where you are. Unfortunately, with all the weather manipulation most all of us have experienced strange and sometimes severe weather. But in all other areas of life, we pray that you are all well. As written in III John 1:2, "Beloved, I wish above all things, that thou mayest prosper and be in health, even as thy soul prospereth".

To say that the vast majority of Americans, and indeed the world, have been misled and deceived more at a more and more extensive and expansive pace indeed, would be an understatement. Just as we were told in *II Timothy 3:13*, "Evil men and seducers shall wax worse and worse, deceiving, and being deceived". Please note that this verse "should" not apply to believers *if* we follow the instructions in the next verse, (14), which says, "But continue thou in the things which thou hast learned and has been assured of, knowing of whom thou hast learned them".

Folks, we *must* get into The Word and hide it deeply in our minds and hearts. Through His Word is how we increase our faith to withstand satan's lies and deceptions.

In closing, let's all remember the many precious promises given to all who are faithful to our Lord and Saviour! Isaiah 40:29-31, Psalms 23:4, Philippians 4:6-7, Proverbs 3:5-6, John 8:12, John 10:10 and Revelation 21:7 are a few you can "feast" on right now.

We love you all in Christ our Saviour.

In Christ's service,

Pastor Butch

Pastor Butch Paugh

Beast Tech Rising: Conditioned For Control

"He causes all, both small and great, rich and poor, free and slave, to receive a mark on their right hand or on their foreheads" (Revelation 13:16). These words written 2,000 years ago depict a future global system that controls who can buy or sell (Revelation 13:17). I'm coming at this from a Pre-Trib Rapture view and hold to the view that believers will be raptured before this Beast system fully manifests, yet we already see its technological groundwork emerging.

In this article, we explore how astonishingly close modern technology is to enabling the kind of total surveillance and control described in Revelation 13, why these advancements are accelerating, and what prophetic significance they carry. The goal is not to set dates or induce fear, but to analyze the signs with a sense of urgency and ask whether the focus should shift from the tech itself to the mindset that would embrace it.

The tech is here and it's not going anywhere, but are people's minds ready? Are they being preconditioned or coerced into accepting such a system. Much like the frog slowing boiling to death in a pot of water; is society's mind being slowly conditioned to accept this future Beast System?

A Prophecy 2,000 Years in the Making - Why Our Generation Is Unique

For nearly nineteen centuries after the book of Revelation was written, its vision of a global regime seemed incomprehensible. How could "authority...over every tribe, tongue, and nation" be given to one leader (Revelation 13:7) in an age of quills and scrolls? And how could a mark control all commerce when most trade was done with coins and bartering?

Moreover, a key prerequisite for end-times prophecy was missing: the nation of Israel. From the Roman destruction of Jerusalem in 70 A.D. until 1948, no generation witnessed Israel reborn as a nation. Yet Bible students knew it had to happen, as Scripture foretold Israel's dispersion and regathering. The re-establishment of Israel in 1948 was a prophetic milestone no previous generation had seen, and it signaled that the clock for the "last days" was ticking again (Matthew 24:32-34, Isaiah 66:8).

At the same time, the past century unleashed a surge in knowledge and technology that is utterly unprecedented. The angel told Daniel that in the time of the end, "many shall run to and fro, and knowledge shall increase" (Daniel 12:4). I believe that is more in relation to going back-and-forth to Scripture, however there is application here. Today, exponential increases in knowledge are the new normal. What took centuries of progress now happens in years, months, days, and even hours! From the invention of computers to the internet to artificial intelligence, technological advancement is accelerating at breakneck speed.

This explosion of knowledge is not random; prophecy watchers see it as providential. It's as if the stage is being rapidly set for fulfillment of what Revelation describes. No previous generation had the capability to literally track every person's buying and selling, or to monitor behavior worldwide in real time. Ours does. As Jesus said of end-time signs, "when you see these things, know that it is near--at the doors!" (Mark 13:29).

Global Surveillance: The Rise of All-Seeing Eyes

Revelation 13 envisions a world where no one escapes the Beast's reach (Revelation 13:7). How close are we to a system capable of tracking every human? Consider the dramatic growth of surveillance technology. By the end of 2021, over one billion surveillance cameras were installed worldwide, roughly one camera for every eight people on earth. Many of these are tied into AI-powered systems that can recognize faces, track movements, and compile digital dossiers.

In China, for example, the government's massive "Skynet" camera network (estimated 600 million+ cameras) and social credit system foreshadow how a centralized authority could monitor compliance or dissent. Western nations, too, have rapidly expanded CCTV networks in the name of security. Today's advanced facial recognition can identify individuals in a crowd within seconds, and AI analytics can flag "unusual" behavior automatically.

AI surveillance systems are increasingly ubiquitous. Modern cities are blanketed with cameras on streets, buildings, and even in smart home devices. Powerful algorithms can sift through feeds from thousands of cameras simultaneously, meaning an AI "watcher" could theoretically keep tabs on an entire population's whereabouts. The mass data collection by Big Tech companies and governments adds another layer. Our smartphones, searches, social media, and purchases are constantly harvested for data. It's often said that agencies today know more about us than we know about ourselves.

As Yuval Noah Harari has observed, past tyrants like the Gestapo or KGB could not surveil everyone effectively--but soon, "corporations and governments will be able to systematically hack all the people. We humans should get used to the idea that we are no longer mysterious souls - we are now hackable animals." Harari warns that the combination of biometric sensors and AI could create a "digital dictatorship" of total monitoring.

Imagine a regime knowing not only where you are and what you do, but even how you feel about the supreme leader. Harari paints a chilling scenario: a future North Korean citizen forced to wear a biometric bracelet 24/7 - "You listen to a speech... and they know what you actually feel... if you're angry, they know, you'll be in the gulag tomorrow." This kind of intrusive surveillance was pure science fiction a few decades ago; now it's on our doorstep.

Importantly, such technology aligns uncomfortably well with the Beast system's goals. Revelation 13:15 says the False Prophet will cause those who refuse to worship the Beast's image to be killed. A feat that implies identifying and locating dissenters. Under pervasive surveillance, identifying non-compliant individuals (e.g. those who won't take the mark or worship the Beast) becomes feasible on a global scale.

We already saw a preview in how some governments tracked people during COVID-19 lockdowns via cellphone location data or enforced quarantine with electronic monitoring. The infrastructure for global tracking of every human is being erected now under various guises--public safety, health, anti-terrorism, etc. Each rationale edges us closer to an "omnipresent" monitoring network. The Beast system will simply inherit and weaponize it fully.

Cashless Society and Digital IDs: Precursor to the Mark

John's prophecy could not be fulfilled in a world of strictly physical cash and local marketplaces. But in our digital economy, the pieces fit. Revelation 13:17 says "no one may buy or sell except one who has the mark or the name of the beast". To control all buying and selling, currency itself likely becomes centralized and digital. We see a strong push toward cashless transactions, credit cards, online payments, and now Central Bank Digital Currencies (CBDCs) on the horizon. Digital ID programs are being rolled out worldwide, aiming to give every person a verifiable e-identity linked to their finances, medical records, and more.

The United Nations and World Economic Forum have championed the idea of universal digital identification (such as the ID2020 initiative) as a way to include

everyone in the financial system. But prophecy students note: what is sold as inclusion and convenience could easily become a tool for exclusion and coercion. Once your money is just bytes in a cloud ledger, access can be turned off with a keystroke. A digital ID tied to a central system could be required to log onto the internet, travel, or make transactions. Exactly the kind of control the Beast will need to enforce the mark.

It is sobering to see how quickly people embrace the technology that could enable the mark. In some countries, governments are testing biometric ID payment systems (scanning your hand, face, or eyes to pay). Companies have begun implanting microchips in employees for building access and cashless cafeteria purchases. One U.S. tech company's CEO even boasted about hosting a "chip party" where employees voluntarily injected an RFID chip the size of a grain of rice into their hand. He envisions that "eventually, this technology will become standardized allowing you to use this as your passport, public transit, all purchasing opportunities, etc."

In other words, one small implant could replace your wallet, keys, ID cards - EVERYTHING. It doesn't take much imagination to see how such implants (or a future iteration of them) could fulfill the role of the mark of the Beast in controlling commerce. The technology itself isn't the mark, of course, but it demonstrates the "architecture" of control is here. Even Klaus Schwab, founder of the World Economic Forum, spoke in a 2016 interview about this coming transformation.

He noted that first we put tech on our wearables, "then we could imagine implants in our brains or on our skin," and that by 2026 people will communicate directly with the digital world via these implants. His vision is essentially a merge of our physical, digital, and biological identities. A chilling echo of Revelation's prediction of a mark in the right hand or forehead.

Beyond implants, governments are also proposing digital health passports and national ID apps. In India, over a billion people are enrolled in "Aadhaar," a biometric ID program using fingerprints and iris scans for authentication in banking and public services. The European Union is planning a digital identity wallet for all citizens⁶. These systems promise greater efficiency but they also create the framework where one central decision can lock a person out of society. I

n the Tribulation, refusing the Beast's mark will carry exactly that penalty: exclusion from the economy under pain of death. We can already see how a future Antichrist could co-opt existing digital ID networks to enforce allegiance. All that's missing is the trigger event and the charismatic leader to implement it.

Global Connectivity: Satellites and the Internet Everywhere

Another factor enabling Beast-like control is instant global connectivity. The False Prophet will "cause" the earth's inhabitants to worship the Beast's image and take the mark--implying rapid mass communication and coordination (Revelation 13:14-16). How could one regime issue orders to billions worldwide in real time? Enter our era's satellite networks and high-speed internet.

Projects like SpaceX's Starlink are launching thousands of low-earth orbit satellites to blanket the globe in internet coverage. Currently (as of Feb 27, 2025) over 7,000 Starlink satellites are in orbit, with plans for over 40,000 to come! The goal is no corner of the planet left offline. This has positive aims (bringing internet to remote regions), but in a prophetic context it also ensures no one can hide. A future global authority won't have to worry about remote villages being out of reach; satellite internet and cell networks see to that.

Likewise, the ubiquity of smartphones means nearly every adult on earth can receive an alert or message instantly. In the past, a dictatorial decree took days or weeks to disseminate through newspapers and radio. Now, a push notification or emergency text can flash on everyone's screen in seconds. We saw a hint of this power with the coordinated messages and lockdown orders during the pandemic. In the Tribulation, when the False Prophet enforces worship of the Beast's image, he could leverage the global network to broadcast the command and monitor compliance.

Even the image of the Beast that speaks (Revelation 13:15) becomes conceivable with modern tech. Think of an AI-powered hologram or broadcast of the Beast's image that people are required to honor, under surveillance of "smart" devices in their homes. Science fiction? Perhaps, but only a few years ago so was the idea of carrying a device in your pocket that tracks your location, listens to your voice, and can scan your face. Today that device is your smartphone. Of course, I'm not saying thus sayeth the Lord that this is how it will be, but let's use our critical thinking skills.

Consider also the rollout of 5G/6G networks and Internet of Things (IoT). In the near future, billions more devices (cars, appliances, wearables) will be connected and reporting data. This creates an ever-tightening web of connectivity around individuals. Under a benevolent government, such connectivity offers convenience; under an authoritarian regime, it becomes a tool for a techno-police state. The Beast system will have at its disposal an always-on, always-connected information grid spanning the whole planet. A grid largely built in our time under the banners of progress and innovation.

"Hackable Animals" and Going "Under the Skin"

Perhaps the most startling aspect of today's technology trends is how openly influential thinkers talk about using them to transform humanity. Take Yuval Noah Harari, a lead advisor to global forums, who bluntly calls humans "hackable animals" in the age of digital surveillance. He argues that with enough data and biometric information, authorities can understand people better than they understand themselves and thus manipulate or control them.

In his warning to world leaders at Davos, Harari said that if a 21st-century tyrant manages to get biometric sensors "under the skin" of millions, the result would be "the worst totalitarian regime in human history", one that even Stalin could only dream of. That phrase "under the skin" is striking. It echoes the kind of invasive control Revelation implies with a mark in the hand or forehead. Harari's point was cautionary, but others speak of these same capabilities as positive innovations.

Klaus Schwab of the World Economic Forum often discusses the "Fourth Industrial Revolution." A fusion of technological breakthroughs that blur the lines between the physical, digital, and biological realms. Schwab noted that this revolution will lead to microchips that can be implanted in the body and even the brain. In one interview, he described a timeline: "At first, we will implant them in our clothes... then we could imagine implanting them in our brains or on our skin... in the end, maybe, there will be direct communication between our brain and the digital world." This isn't a conspiracy theory; it's a stated vision from the architect of Davos.

When powerful leaders talk of internalizing technology into the human body ("under the skin"), prophecy watchers can't help but recall the language of the mark. Schwab's top advisor (Harari) adds that this kind of intimate surveillance tech can "go under the skin, collect biometric data, analyze it, and understand people better than they understand themselves." The convergence of these ideas (microchips, biometric surveillance, AI analysis of behavior) reads like a prelude to the Beast system.

It's crucial to emphasize that neither Schwab nor Harari are the Beast or False Prophet (certainly good candidates, though). But their agendas and quotes show the mindset of technocratic elites: a belief that technology should reshape society and even humanity itself. They often argue this is for the good (health, efficiency, equality), but Scripture warns that human pride and power often pave the road to oppressive ends (see Proverbs 16:18).

In any case, the fact that world leaders are openly pursuing the ability to monitor, chip, and data-mine humans should set prophetic alarm bells ringing. The Beast system described in Revelation will have exactly those powers. It will "monitor

everyone all the time," to quote Harari's description of a digital dictatorship. The groundwork is being laid in plain sight.

15-Minute Cities and Climate Compliance: Control in the Name of "Good"

Not all precursors to the Beast system come draped in scary or overtly tyrannical packaging. Some are presented in a way that the public would perceive as "utopian." Now, you and I know better. We can see right through the smokescreen and know it's more "dystopian." Take the rise of the "15-minute city" concept. Urban planners promote it as a way to design cities so that all necessities (work, school, shopping, healthcare) are within a 15-minute walk or bike ride.

Many worry it could devolve into districts people are not allowed to leave freely, under the guise of climate lockdowns or rationing fossil fuels. We've already heard trial balloons about limiting driving into certain zones and monitoring personal carbon footprints. It's not hard to imagine a near future where, for "environmental reasons," governments use smart city tech to restrict travel.

Say, you've exceeded your 15-minute zone trips this month, so your digital pass won't unlock the train station gate. The eco-justified control systems emerging (from energy usage tracking to smart thermostats that can be controlled remotely) carry a whiff of Revelation's warning. People might accept severe restrictions if told it's to save the planet. In the Great Tribulation, the Antichrist will certainly exploit crises (environmental, economic, etc.) to justify draconian control.

The COVID-19 plandemic gave us a real-life case study in how quickly populations can surrender freedoms in the name of safety. Virtually overnight in 2020, billions complied with stay-at-home orders, travel bans, business shutdowns, and later vaccine mandates and digital health passes. To be clear, many of these measures had public health motivations. But prophecy students noted how it revealed a precedent: in a fearful global crisis, most people will submit to sweeping controls (even censorship of dissenting voices) and even shaming or coercing those who don't comply "for the public good." We saw societies willingly adopt smartphone contact tracing apps, stand in biometric queues to prove their health status, and accept a new normal where government could dictate occupancy of your home for holidays.

Now imagine a crisis post-Rapture: tens of millions vanish, chaos ensues. The world will be desperate for order and safety. Enter a charismatic leader with an explanation and a plan. It's easy to see how, in that panicked atmosphere, the masses would embrace extraordinary controls, temporary, of course, until the emergency is past (but the measures never truly go away). The psychology of compliance learned in 2020-

2021 may well be a dress rehearsal for the ultimate compliance test in the Tribulation: take the mark and swear allegiance to the new order, or be cast out as a threat to peace and security.

Quantum Leaps: Technology Racing Toward a Control Threshold

Why is technology accelerating so fast right now? Many experts speak of a coming "technological singularity," a point where AI and computing power advance beyond human control. It's as if an unseen hand is removing restraints (2 Thessalonians 2:7) so that all the tools needed for Revelation's scenario will be ready on time. We are the first generation with not only widespread digital systems, but now AI that can analyze and make decisions at superhuman speed, and emerging quantum computing that could dwarf the power of all today's computers combined. Just this year, researchers made breakthroughs with Majorana fermions--exotic particles that are enabling more stable quantum bits (qubits).

Microsoft introduced a prototype quantum chip (Majorana 1) using a "topological" design that they expect can scale to a million qubits on a chip. To put that in perspective: a conventional supercomputer might use a few hundred bits in an encryption algorithm, but a quantum computer with a million qubits could theoretically break nearly any encryption in seconds. That means no data would be secure from a regime with such technology. Financial records, personal communications, even cryptocurrency blockchains could be cracked open. The Beast's control system would have no trouble accessing every database or communications channel if it harnesses this kind of computing power.

Quantum computing also promises AI advancements (since AI can run vastly faster with more computing muscle). Pair that with ubiquitous 5G/6G internet, and you have the means to process and respond to every human action in real time. It's as if the world is rapidly constructing the central nervous system of a global Beast. Even things like Majorana fermion discoveries have prophetic intrigue - Majorana particles are their own antiparticle, a curious parallel to how the Antichrist will be an imitation "Messiah" opposite to Christ.

Whether or not that connection is meaningful, the takeaway is that science is unlocking almost god-like capabilities (though often without considering moral implications). The acceleration we see all hints that we're nearing what Jesus called the "days of Noah" (Matthew 24:37), a time of unprecedented evil and intervention. In Noah's day, humanity was on the verge of irreversible corruption, and God stepped in. Today, we race toward a moment when human and machine might merge, when

privacy is gone, and when global governance has the tech to become all-powerful. It suggests we are on the threshold of the Tribulation hour.

From Technology to Mindset: Are We Ready to Accept the Beast?

Given all these developments, one must ask: what's still holding back the full implementation of the Beast system? The technology is essentially here or imminent. The geopolitical pieces (a revived Israeli nation, talk of global governance, etc.) are in place. The missing ingredient may simply be timing and mindset. 2 Thessalonians 2:6-7 speaks of a Restrainer holding back the "mystery of lawlessness" until He is taken out of the way. I believe this Restrainer to be the Holy Spirit-Indwelt Church. The Holy Spirit does not leave. He remains. He has been here since creation when He hovered above the waters (Genesis 1:1).

Once the Church is removed at the Rapture, all bets are off. Lawlessness will surge, and the Antichrist will be revealed (2 Thessalonians 2:8). At that point, there will also be a strong delusion sent on those who refused the truth, so they will believe the lies of the Antichrist (2 Thessalonians 2:11-12). In other words, the mindset of the remaining world will be primed to accept Beast system control.

Even before that moment, we can see the conditioning at work. Society is increasingly trading freedom for promises of security, convenience, and even virtue (as in, "good citizens do X, only troublemakers refuse"). The cultural mindset is shifting toward one that might openly welcome a messiah-like figure--someone who says "I'll solve climate change, pandemics, and war if you'll just follow me and take this mark of loyalty."

The book of Revelation says the whole world will marvel and follow the Beast (Revelation 13:3). That doesn't happen by coercion alone. There will be a willing, even fervent, buy-in by the masses. We see seeds of that fervor in the almost religious nature of some political and environmental movements today. Humanity is yearning for unity and safety amid chaos. The Antichrist will offer exactly that, and with Satan's backing he'll have an allure that people cannot resist (apart from God's grace).

So perhaps the question now is not what new tech is around the corner, but what events or narratives will flip the switch to implement what's already here. Are we on the verge of a major psychological inflection point? Some speculate another global crisis (bigger than anything before) could be used to justify instituting the full Beast infrastructure practically overnight.

Others point to the Rapture itself: when millions vanish, the world will be shocked and terrified, creating the perfect environment for the "man of sin" to rise with persuasive answers. If tomorrow a world leader announced a secure global ID to restore order and "ensure this never happens again," many would applaud and line up to receive it--especially if rejecting it meant social shame or exclusion from the rebuilt "peace."

In conclusion, the pace at which Revelation 13's scenario is becoming technologically possible is startling. Jesus told us to "watch" for the signs of His return (Mark 13:37), and to understand the season (Matthew 16:2-3). We are watching prophecy convergence like never before: Israel restored, worldwide instant communication, and tools for global economic control in play.

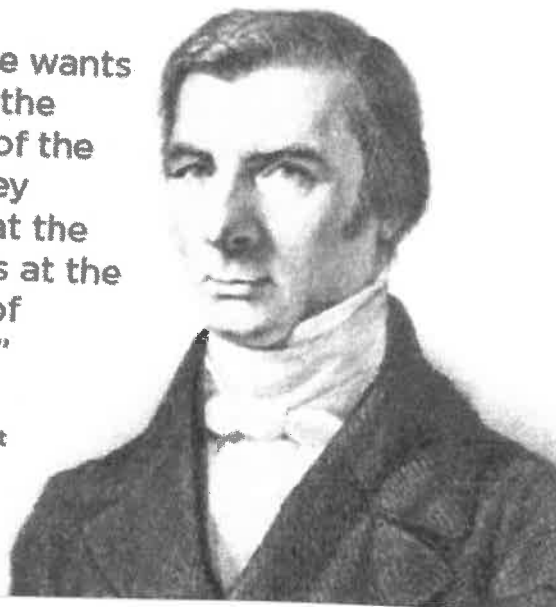

This analysis isn't wild speculation; it's reading headlines and hearing quotes straight from the shapers of our future. It carries an urgent question: if the technology is essentially ready, is humanity now being prepped in heart and mind to embrace the Beast system? And by extension, how close must we be to the Lord's shout to call His Church home before that wicked one is revealed (1 Thessalonians 4:16-17, 2 Thessalonians 2:8)?

As believers, this is both a warning and an encouragement. A warning that the world is hurtling toward the very scenario the Bible predicted, meaning those left behind will face exactly what God prophesied. But an encouragement that God's Word is true and His plan of redemption is right on schedule. We don't know the day or hour, but we can see the Tribulation shadows lengthening.

Now is the season to share the Gospel, to implore friends and loved ones to understand what's coming. The stage lights are dimming, the curtain is about to rise on the final act of this age. The technology for the Beast system is here; the only question is, will the world now embrace the mindset to fully accept it?

"Everyone wants to live at the expense of the State. They forget that the State lives at the expense of everyone."

- Frederic Bastiat

Real ID, Voter ID & Digital ID: The Future of American Identification

Posted on [March 27, 2025](#) Author [Derrick Broze](#) Comment(1)

While MAGA celebrates Trump's latest Executive Order as an effort to secure US elections, the reality is that the EO is the latest move inching Americans closer to mandatory digital identification programs.

On March 25th, President Donald Trump signed an Executive Order titled [Preserving and Protecting the Integrity of American Elections](#). This EO was aimed at securing U.S. elections after years of claims of widespread voter fraud and illegal voting. While there does exist some element of truth to these claims, they are being exploited to push the United States closer to requiring digital ID's not only for voting, but for daily life.

The EO states that the US "fails to enforce basic and necessary election protections employed by modern, developed nations". It highlights how nations like India and Brazil are "tying voter identification to a biometric database". Although the EO does not explicitly mention the US operating a similar biometric database, that is absolutely the long term plan.

The EO outlines what qualifies as "documentary proof of United States citizenship", including an identification document which is "compliant with the requirements of the [REAL ID Act of 2005](#) that indicates the applicant is a citizen of the United States".

The REAL ID Act was first passed in 2005 after a recommendation by the fraudulent 9/11 Commission in the wake of the 9/11 attacks. Many US states have resisted implementing the REAL ID measures for the last 20 years. However, the years of avoiding compliance with the REAL ID Act are now coming to an end on May 7th, 2025.

In January, one week before Trump returned to the White House, the TSA [published the final rule for enforcement](#) of REAL ID compliant identification cards. Beginning on May 7th, Americans attempting to board commercial flights or enter federal building will need to display state-issued driver's licenses and identification cards that meet the security requirements established by the REAL ID Act.

"Congress passed the REAL ID Act in 2005 to enhance security standards for identification, directly in response to the security vulnerabilities highlighted by the 9/11 attacks," former TSA Administrator David Pekoske said at the time. "Identity verification is foundational to security."

One form of "REAL ID compliant" identification which is becoming increasingly popular is known as mobile driver's license (mDL), or simply digital drivers licenses.

Real ID, Mobile Driver's Licenses, & Digital ID

Mobile driver's licenses are digital identification stored on a smart phone which typically include the same information as physical driver's licenses and identification cards. At the moment, not all mDLs are compliant with the requirements of the REAL ID Act, but the TSA is granting a waiver to certain states to allow residents to use the mDLs.

These digital ID's are beginning to roll out across North America in 3 common forms, including proprietary apps owned by a local, state, or national government; various state-approved apps like SmartID; and the Apple Wallet.

According to a [guide to digital drivers licenses](#), users will open the chosen app, scan the front and back of their physical driver's license, and then verify their identity with a selfie (or similar biometric data) — something very similar to what appears to already be starting on Twitter. Once verified the user can begin using their digital ID app as they would a physical ID card.

[Government Technology recently reported](#) that at least five million Americans have signed up for mDLs in 11 states that have interoperable programs fully implemented. GovTech determined these figures through Public records requests. They also note that at least a dozen other states, including [California](#), are already conducting pilots or will soon be launching their own mDL programs.

GovTech also notes that states like [Iowa](#), [Colorado](#) and [Utah](#) have partnerships with businesses and government agencies to accept their mobile IDs. Interestingly, the businesses which have the highest rate of adoption are those which serve or sell products like liquor and cannabis. Other businesses accepting the mDLs include credit unions, security firms, real-estate companies, auto body shops, and health-care organizations.

In May 2021, the American Civil Liberties Union discussed efforts to mandate digital drivers licenses. In a report [titled "Identity Crisis"](#) the ACLU warned that the use of digital driver's licenses,

"raises the danger that there will be no balanced assessment of the costs and benefits of such a system and that we will adopt systems that do not strike the right balance between the needs for identification, security, and convenience and Americans' well-founded aversion to government and corporate surveillance and regimentation".

Jay Stanley, senior policy analyst with the ACLU's Speech, Privacy, and Technology Project, said the switch to digital IDs would have "big implications" for American life. *"If not done just right, digital driver's licenses could be disastrous for privacy, increase inequity, and lead to pervasive ID checks in American life, including on the internet,"* [Stanley said](#).

In June 2022, the [Center for Human Rights and Global Justice](#), a "hub for human rights study" at New York University (NYU) School of Law, issued a 100-page report detailing the [growing dangers](#) of a reliance on digital identity around the world. The report, titled *Paving a Digital Road to Hell?*, examined the role of the World Bank and other international networks which have been promoting the use of digital ID in recent years. This report points a finger at the World Bank and the aforementioned ID4D initiative but also notes that the program was started with a "catalytic investment" from the Bill & Melinda Gates Foundation, the Omidyar Network, as well as various governments.

“We have noted that the World Bank and its ID4D Initiative do not stand alone in pursuing the digital ID agenda. They exist within a global network of organizations and individuals,” the report states. In addition to governments like the UK, U.S., and France, philanthropic foundations, and banks, the NYU report also points a finger at *“private biometrics corporations like Idemia, Thales, and Gemalto”*.

TLAV has previously reported on [the role of the Thales Group](#) in advancing the digital ID agenda.

Digital ID & Facial Recognition

While compliance with the REAL ID Act does not currently require a digital ID, mDLs are the first step in that direction.

In fact, the TSA has already made it clear that they are ready and willing to [accept digital ID's](#) from states which have begun to roll them out. They even offer a [convenient map](#) to highlight the states which are using digital IDs.

The TSA's website on digital ID's explains:

“Use your smartphone for identity verification with digital identity solutions like mobile driver's licenses or ID passes, now accepted at select TSA checkpoints through platforms such as Apple Wallet, Google Wallet, and Samsung Wallet or a state-issued app.

For the moment, American travelers have four options for presenting their identification — tap or scan a digital ID, and show a driver's license, state-issued ID, or passport.

It's worth noting that at the same time the TSA is accepting mDLs and REAL ID compliant ID's they are also testing out biometric facial recognition cameras at international terminals across the United States. The TSA's own website states, *“TSA officers now use biometric cameras to assist them with identity verification. The photo is optional.”* They also claim that all photo and personal data are deleted after verification.

While this biometric verification is currently optional, the TSA has received pushback for failing to adequately notify the public they can opt out of the procedure. Former TSA Administrator David Pekoske previously admitted that the government's long term goal is to make biometric screening mandatory.

In early February, the Department of Homeland Security's Inspector General [announced an audit into the TSA](#) relating to the use of facial recognition technology after a bipartisan coalition of representatives made a [formal request](#). The lawmakers noted that in April 2023, former TSA Administrator Pekoske admitted at the South by Southwest Conference in Austin, Texas that *“we will get to the point where we will require biometrics across the board”*.

The dangers posed by digital ID when combined with facial recognition cannot be overstated. Wired recently acknowledged that digital passports and face scanning are rapidly expanding and [represent a threat to privacy](#).

“While ending frustrating airport lines would be welcome for many, the shift to digital travel document also raises concerns about how data is protected, a normalization of problematic surveillance technology such as face recognition, plus whether digital ID systems will be

further rolled out to other parts of society and who ultimately controls or builds these pieces of infrastructure,” Wired wrote.

Disha Verma, of the Internet Freedom Foundation, also told Wired that India’s Digi Yatra face-recognition boarding system is facing pushback. *“The way that it’s happening in India is no longer voluntary, and it’s no longer something we can hold the government or anybody else accountable for,”* Verma stated.

The dangers of face recognition are not new. As far back as June 2019, the Georgetown Law Center on Privacy & Technology released a report titled, [“America Under Watch: Face Surveillance in the United States”](#), which called for a moratorium on facial recognition technology. As I warned in July 2019, the [rise of face recognition should scare all Americans](#).

Digital ID’s Must Be Resisted

In my previous reporting I have outlined how the [push for digital identity programs is a scam](#) disguised as a human right. This scam is designed to lull the world into accepting digital identity schemes as beneficial, convenient, safe, and necessary for the world of the future.

The United Nations and the World Economic Forum both promote the use of digital identities using blockchain technology and biometric data gained by scanning the faces or retinas of individuals. The World Bank and the UN have also been funding the development of such programs as part of the [Identification for Development \(ID4D\)](#) initiative.

The World Bank is also funding [digital biometric ID programs in Mexico](#), pushing digital ID in poorer countries with the ostensible goal of providing legal identity to the 1.1 billion people who do not currently have one. The goal is to get the world on digital IDs by 2030 as part of the United Nations Sustainable Development Goals and the 2030 Agenda.

The Sustainable Development Goals (SDGs) are a collection of 17 interlinked objectives adopted by the United Nations in 2015 with the ostensible goal of ending poverty, protecting the planet, and spreading peace and prosperity to all people by 2030. However, privacy advocates and digital rights groups have warned about the dangers of digital ID programs.

During the COVID-19 panic many nations implemented “vaccine passports” as a means for travel and work. These programs were essentially the equivalent of a digital ID.

Although many people believed a Kamala Harris presidency would all but guarantee the expansion of dangerous programs like digital IDs, I [warned before the election](#) that no matter who is president the infrastructure was already in place and these schemes would expand. With Donald Trump promising to secure elections by aligning with the goals of the REAL ID Act of 2005 we are ensured to see an increase in calls for making digital IDs mandatory. To make matters worse, Trump’s calls for a [“biometric entry/exit system”](#) as the solution to fighting illegal immigration makes it clear that some version of digital IDs backed by facial recognition will soon be the norm in the United States.

It will be by air, by land and by sea, according to Trump. So that’s not just immigrants. Welcome to your Freedom MAGA Biometric

Greatest Immediate Danger is Digital ID – Catherine Austin Fitts

By Greg Hunter's USAWatchdog.com (Saturday Night Post)

The last time Catherine Austin Fitts (CAF) was on USAWatchdog.com, she warned that the real battle would be fought in the Trump Administration trenches between "[Freedom & Deep State Control.](#)" CAF contends that there is no bigger ongoing battle for lovers of freedom than the battle taking place over the freedom killing idea of digital ID. CAF warns, "The greatest immediate danger is digital ID. The Trump Administration is pushing digital ID. We are seeing new testimony in Congress saying the right kind of [digital ID will save the federal government \\$1 trillion a year in expenses.](#) There is one thing after another pushing the digital ID, and it is the last thing we ever want. Do everything you can **not** to get this. They tried to get the digital ID after 9/11, and they finally got the states to do 'Real ID,' and they are promoting it like crazy. . . . Do **not** accept Real ID. . . They can't make you get a Real ID."

It looks like the CV19 bioweapon vax mandate is coming to an end along with the CV19 vax injections that caused so many deaths and injuries. Trump and his new HHS Secretary RFK Jr. are starting the process of stopping this madness. Fitts thinks the CV19 vax has both negative physical and spiritual implications. CAF says, "Does it mean our soul cannot pass over? Do we become earthbound dead?"

Another big battle front is Bitcoin and the government wanting to own Bitcoin as some sort of reserve. CAF says don't fall for this scam. CAF explains, "Bitcoin started out as an ingenious payment system, and then Bitcoin got hijacked. . . . It is an asset that can be used to pump and dump. . . . for the price to keep rising, you need keep bringing in new investors. It's really a Ponzi Scheme. What would the big investors like to do? They would like to get out of Bitcoin and into real assets like gold and real estate. . . . By mandating huge purchases of Bitcoin by federal and state government, they are going to run the price up. We saw Larry Fink at Davos (World Economic Forum) suggesting in an interview that [Bitcoin could run up as high as \\$700,000.](#) Fink has a Bitcoin ETF. . ."

CAF also talks about gold and says, "It has never looked better as an investment opportunity."

CAF talks about having physical gold and silver as core assets. CAF also explains the so-called "Trump Pivot" and what "We the People" need to do to protect ourselves for what is coming.

In closing, CAF says, "If we can face it, God can fix it all."

AI Has The Potential To Become One Of History's Most Dangerous Idols

Spiritually, a significant foreseeable consequence of AI systems like large language models (LLM) is that humans may easily be tempted to begin looking to them as the final authority for truth. Because of their astounding capabilities to rapidly synthesize knowledge from across the internet, LLMs might seem "all-knowing."

We may begin looking to AI as the ultimate, unquestionable expert. But AI is engineered by fallible humans, trained on data from fallible humans, and prone to bias, errors, and "confabulation"--presenting made-up information as factual. Only God is all-knowing, infallible, and the ultimate Truth. His Word, not the outputs of AI, must be our final authority.

But the spiritual implications of AI go further. As noted earlier, people have already begun turning to AI to seek spiritual guidance, answer moral questions, and fabricate "Bible" passages. Relatedly, Professor Noah Yuval Harari, a contributing author and speaker for the World Economic Forum (WEF), has suggested that "AI can create new ideas, can even write a new Bible."

Certain occult practitioners have begun using AI to co-author esoteric writings or generate symbols intended to invoke dark spiritual powers. Some people also see AI and other emerging technologies as a "savior" that will "redeem" humanity from problems including illness, aging, and even mortality. Others worship AI outrightly, with one notable AI-based religious movement being The Way of the Future founded by former Google employee Anthony Levandowski. Still others hope AI will help us become "like God."

All these trends point toward the potential for AI to become one of history's most compelling idols. Idolatry, like other grave sins, leads to eternal destruction (e.g., see Revelation 21:8). Humanity's gravest mistake regarding AI would lie not in making machines that could overpower us on earth but in seizing machines as idols to the destruction of our souls.

For these reasons, we are also wise to remember the truth about God's nature compared to our nature and to AI's nature. AI may gain knowledge, power, and pervasiveness exceeding our imaginations. AI may evoke, invite, or even demand worship--as Microsoft Bing's CoPilot unexpectedly did when users prompted it to exhibit delusions of grandeur.

AI may tempt us to think we can grasp omniscience, omnipotence, and omnipresence if we unite ourselves with it. But not even an AI-connected global brain would make humanity "like God." We would still be unable to fully know, manipulate, or occupy anything but tiny slices of a cosmos we did not create. We would still be contingent beings subject to the laws of a universe we do not sustain. And we would still blush along with Job to hear God ask, "Where were you when I laid the foundation of the earth? Tell me, if you have understanding" (Job 38:4).

That is one question AI cannot answer. It is Jesus, not AI, through whom all things were created (Colossians 1:16-17). He who "became to us wisdom from God" (1 Corinthians 1:30) is the most intelligent being to walk the earth--and is himself the Truth (John 14:6). His voice is the one we must follow. Amidst the unfolding spiritual impacts of AI, we must look to God's Word and the gospel as humanity's authority for truth and source of hope for redemption through Jesus.

Impacts on Humankind

Along with these spiritual factors, AI's potential earthly impacts demand consideration. These impacts may affect humans as individuals, as societies, and as a species. Effects on humankind as a species are speculative but worth thinking about proactively. For instance, some prominent figures have raised concerns about AI's potential to annihilate humankind.

Scripture seems clear that humans will be occupying earth at Christ's return, suggesting that an AI apocalypse will not cause our extinction. God, in his sovereignty, will evidently sustain humanity to the end. Still, history's wars, plagues, and famines remind us that tragic scenarios can precipitate the deaths of millions. Efforts to identify genuine risk levels for AI usage and to establish appropriate safeguards accordingly are therefore both practically wise and ethically necessary.

Other implications for humankind as a species surround the prospect of people integrating AI into transhumanist technologies in hopes of altering or transcending human nature. A biblical view that humans are primarily creatures rather than self-creators, that our divinely created nature is given and good (although fallen), and that Jesus--who took on human nature--is humanity's Redeemer contradicts these visions. In response, Christians can affirm "human" (rather than transhuman) uses of AI while pointing others to humanity's true hope in Jesus.

What about AI's more immediate prospective impacts on humans as individuals and societies? Three types of such impacts to consider include AI's potential for trivialization, economic effects, and surveillance infrastructure. A closer look at each of these points is in order.

Trivialization

Here, trivialization refers to the loss of certain reasoning, research, and communication skills that would foreseeably unfold among humans if we began largely outsourcing these skills to AI. In the 1985 book *Amusing Ourselves to Death*, social commentator Neil Postman warned of a similar trivialization process happening as society's primary information source shifted from books to television. Postman perceived this switch would lead to the widespread atrophy of higher reasoning skills, leaving humans more vulnerable to manipulation.

What would Postman have said about delegating our higher linguistic reasoning to machines altogether? If "the pen is mightier than the sword," are we wise to hand over this weaponry to AI? How much of our thinking do we want machines--especially ones prone to bias and confabulation--to do for us? We can apply AI to support our uses of our God-given brains. But we cannot afford to let our own skills of information-sourcing, communication, and ethical reasoning atrophy at a time when we need them more than ever.

Economic Effects

Along with trivialization, a second social consequence of expanded AI usage surrounds potential economic effects. On the positive side, researchers have pointed out that AI "can free humans from various dangerous and repetitive duties" while increasing productivity. Still, one researcher in 2020 predicted that "there will be considerable skills disruption and change in the major global economies" in the coming years.

These changes are difficult to forecast, and statistics about predicted job losses may rely on assumptions that are not necessarily accurate--for instance, about how quickly, totally, and feasibly certain jobs can be automated. As another researcher stated, "By developing hybrid AI, tools will become our new assistants, coaches and colleagues and thus will augment rather than automate work."

However these changes might unfold, Christians can take at least three proactive steps in response. First, we can maintain a high regard for every human life regardless of individuals' social contributions, never devaluing God's image-bearers as "useless"

compared to technology. Second, we can learn how AI might make us better at what we do--without crossing important boundaries such as intellectual integrity.

For instance, adding disclaimers to certain written materials stating what role, if any, generative AI played in their development would help maintain trust, uphold transparency, and keep clear distinctions between human and AI contributions to products. Third, we can emphasize the essential human elements of tasks that God intended humans to fulfill, like child-raising, and of jobs with relational focuses, such as caregiving. We can also excel at "being human" in our jobs where AI cannot, offering genuine human interactions that encourage, bless, and demonstrate God's love to clients and colleagues.

Surveillance and Control

In addition to economic impacts and trivialization, a third area of societal ethical concern involves privacy and consent issues surrounding AI-enabled surveillance infrastructure. AI's facial recognition, data collection, and information-processing capacities allow authoritarian governments to track and control citizens more efficiently than ever. Even in more democratic nations, AI enables corporate and government surveillance for purposes that social commentator Rob Dreher might call "soft totalitarian."

For instance, a document published by the World Economic Forum (WEF) known as the Diversity, Equity, and Inclusion (DEI) 4.0 Toolkit encourages organizations to use AI for monitoring all employees to ensure conformity with DEI policies and to identify who needs "further coaching." Importantly, other documents published by the WEF suggest the relevant definitions of DEI would not align with Scripture.

Similarly, high-profile persons, including the vice president of Google, have signed a "Social Contract for an AI Age" to "provide the foundations for a new society." The contract states itself to be derived from the "social contract" concepts of the 1700s--without mentioning that such contracts helped to seed modern totalitarianism or that their fine print required citizens to relinquish personal freedoms and submit to the "general will" or be liable to capital punishment.

Ominously, the new contract did request "a system to monitor and evaluate governments, companies, and individuals" based on their maintenance of the new social norms. These norms would include obeying policies by the United Nations and WEF, prohibiting (undefined) "online hate" and incentivizing corporations to "only do business" with other signatory companies and nations.

As mentioned earlier, other prominent figures, including Ben Goertzel, advocate even more overtly for applying AI to reorder society according to a "Marxist vision." Dr. Goertzel, the WEF, the Social Contract signatories, and authoritarian governments are some of the leading figures in the development, regulation, and implementation of AI.

These figures' calls to move AI in a direction that may undermine human freedoms and flourishing highlight the need for Christian engagement regarding AI-related bioethics. In response, Christians can call for corporate and government accountability, defend religious freedom, and exercise wisdom in relevant consumer decisions and technological practices.

Conclusion

The rise of artificial intelligence unlocks an altered world of possibilities that are already transforming how humans work, learn, heal, grieve, relate, and worship. With capabilities so complicated that not even the most informed human minds fully understand these systems' inner workings, today's AI evokes a spectrum of hopes, fears, and questions. Neither hoping in AI as our savior nor fearing AI as our doom completely aligns with a biblical view, which reveals that our Creator is the ultimate focus of our redemptive hope and reverent fear.

A biblical view does demand navigating the AI age with wisdom, keeping timeless truths about God and humanity at the forefront. These truths include the realities that we are finite, fallen creatures who bear our Creator's image. This Creator designed humans with specific purposes in mind, manifested in how he ordained humans to live in relation to himself, to one another, and to creation. From "having dominion" over creation, to loving our neighbors, to raising families, to leading churches, to sharing the gospel, some tasks seem specifically meant for humans.

Our best approaches to AI will be those that support humans in our God-given callings without displacing, devaluing, or promoting false assumptions about humanity. In this emerging landscape of AI, with its horizons of novel promises and perils, Christians can lead with biblical wisdom and ethical engagement. For even in this new world, God's Word supplies the principles we need to navigate technological change as the creatures that our Creator designed us to be.

REAL ID: Phony Security, Real Authoritarianism

by [Ron Paul](#)

Those who hoped the second Trump Administration would reject big spending, war, and restrictions on liberty continue to be disappointed. A new disappointment came when Department of Homeland Security Secretary Kristi Noem announced her department would in May begin enforcing the REAL ID law.

Passed in 2005, the REAL ID Act created federal standards for driver's licenses. The law requires everyone applying for a driver's license to provide the DMV with his social security number, proof of legal residence, and two proofs of his home address. The REAL ID Act allows the Homeland Security Department to mandate, as it sees fit, the including of addition items in the related government database, including "biometric" identifiers. Biometric identifiers include personal data such as retina scans, fingerprints, and DNA.

People who doubt that this database will be used to violate the rights of US citizens should ask what a present-day J. Edgar Hoover — a former FBI director who was notorious for collecting private information on politicians and other prominent individuals — would do with a database containing personal and even biometric information on American citizens. They should also consider the IRS's history of targeting presidents' political opponents. Americans also have the threat of violations of their rights by hackers. The government has a poor track record of protecting data of US citizens. REAL ID's supporters deny the law turns state driver's licenses into national ID cards because states have no mandate to implement REAL ID. However, citizens of any state that refuses to adopt REAL ID will be unable to use their state-issued IDs for boarding an airplane or riding on a train.

Once the initial uses of REAL ID are established, the government will then require REAL ID for other activities. For instance, local transportation authorities may be offered federal funds to implement REAL ID requirements for public transportation. Several pro-Second Amendment organizations oppose REAL ID because it could be used to monitor gun owners. There is nothing in the law prohibiting a future progressive Homeland Security secretary from requiring REAL ID for a firearms purchase. Imposing a REAL ID mandate on gun ownership would further the authoritarian objective of having a database containing the name and address of, and how many and what type of firearms are owned by, every law-abiding gun owner in the country.

REAL ID also menaces health freedom. One of the few victories for liberty during the covid hysteria was the failure of "vaccine passport" schemes to be more widely imposed. These schemes attempted to forbid people from returning to their normal lives unless they proved they were "fully vaccinated" against covid.

REAL ID was marketed as a weapon in the "war on terror." However, Thomas Massie, the most consistent and courageous defender of liberty in the House of Representatives, pointed out that 9-11 hijackers used passports from their own countries. Rep. Massie wrote, "As long as the pilot's door is locked and no one has weapons, why do you care that someone who flies has government permission?" Like most post-9-11 security bills, REAL ID does nothing to protect the American people's safety. It does, though, do much to endanger their liberty. REAL ID could even be the final piece of the transformation of America into a total surveillance society where

government monitors, and thus controls, our actions. Americans who understand the danger must work to get the Trump administration to reverse its position.

"One of the most important reasons for studying history is that virtually every stupid idea that is in vogue today has been tried before and proved disastrous before, time and again."

THOMAS SOWELL

Scientists Drop Bombshell: Ivermectin Cures Cancer, Parkinson's, Vax Damage, Many Various Diseases

Frank Bergman

Ivermectin is continuing to stun the scientific community as the “wonder drug” is being used to treat a growing list of various ailments in humans.

During the pandemic, the corporate media and bureaucratic health officials attempted to smear ivermectin as a “horse dewormer” after it was found to be successful in treating Covid patients.

Despite the reports of cheap and readily available ivermectin being successfully used to treat patients, it posed a threat to the pharmaceutical industry's Covid mRNA shots and the profits from pushing the injections onto the public.

This smear campaign led to ivermectin, a Nobel prize-winning drug considered to be the second most important medicinal discovery after penicillin, being labeled as “dangerous.”

Ivermectin, a drug derived from a [soil microbe](#), was found to be incredibly effective in treating Covid patients, however.

One prominent case of ivermectin helping a Covid patient involved 80-year-old Judith Smemthiewicz.

After being told there was not much hope left for her, Smemthiewicz made a remarkable recovery after taking the drug in early 2021.

“...[she] was placed on a ventilator in late December,” ABC's WKBW [reported](#) at the time.

“Initially doctors gave her one dose of the controversial drug Ivermectin, and she improved.”

The miracle drug has been found to treat far more serious illnesses than Covid, however.

In 2022, a [study](#) found that ivermectin inhibits tumor metastasis.

In the “Abstract” section of the study’s paper, the researchers wrote:

“Tumor metastasis is the major cause of cancer mortality; therefore, it is imperative to discover effective therapeutic drugs for anti-metastasis therapy.

“In the current study, we investigated whether ivermectin (IVM), an FDA-approved antiparasitic drug, could prevent cancer metastasis.

“Colorectal and breast cancer cell lines and a cancer cell-derived xenograft tumor metastasis model were used to investigate the anti-metastasis effect of IVM.

“Our results showed that IVM significantly inhibited the motility of cancer cells in vitro and tumor metastasis in vivo.

“Mechanistically, IVM suppressed the expressions of the migration-related proteins via inhibiting the activation of Wnt/ β -catenin/integrin β 1/FAK and the downstream signaling cascades.

“Our findings indicated that IVM was capable of suppressing tumor metastasis, which provided the rationale on exploring the potential clinical application of IVM in the prevention and treatment of cancer metastasis.”

Another [study](#) revealed that ivermectin can help prevent neurological disorders such as multiple sclerosis.

In the “Conclusion” section of the study’s paper, the researchers wrote:

“The results evidenced that IVM and nano-IVM administration is capable of reducing demyelination in mice.”

Demyelination is the loss of myelin in nervous system tissue.

The [study](#) aimed to analyze ivermectin’s effects on the phenomenon.

In the “Objectives” section of the study, the researchers note:

“Multiple sclerosis (MS) is a chronic disease of the central nervous system (CNS) and its cause is unknown.

“Several environmental and genetic factors may have roles in the pathogenesis of MS.

“The synthesis of solid lipid nanoparticles (SLNs) for ivermectin (IVM) loading was performed to increase its efficiency and bioavailability and evaluate its ability in improving the behavioral and histopathological changes induced by cuprizone (CPZ) in the male C57BL/6 mice.”

Additionally, ivermectin has been found to treat injuries caused by Covid mRNA shots.

Dr. Mary Talley Bowden revealed that, in her own clinical practice, ivermectin has offered profound results in treating vaccine injuries.

“I usually start them on ivermectin because it binds the spike protein,” Bowden said.

“It has anti-inflammatory properties.

“It actually has 20 different mechanisms of action, and the reason I start with ivermectin, other than what’s written in the literature, but clinically, I’ve seen some patients with really severe rashes from these shots, and they’ve cleared up pretty dramatically with the ivermectin.”

Another [study](#) chronicled the history of the drug, its technical characteristics, as well as a long list of ailments it has been documented to treat.

According to the [study](#), ivermectin can be used to treat:

- cancer
- myiasis
- trichinosis
- malaria
- leishmaniasis
- American trypanosomiasis
- schistosomiasis
- bedbugs
- rosacea
- asthma
- epilepsy
- neurological diseases
- HIV
- tuberculosis
- Buruli ulcer

The study explained that the drug can be used to treat a “variety of cancers,” noting:

“There is a continuously accumulating body of evidence that ivermectin may have substantial value in the treatment of a variety of cancers.

“The avermectins are known to possess pronounced [antitumor activity](#), as well as the ability to potentiate the antitumor action of vincristine on Ehrlich carcinoma, melanoma B16 and P388 lymphoid leukemia, including the vincristine-resistant strain P388.

“Over the past few years, there have been steadily increasing reports that ivermectin may have varying uses as an anti-cancer agent, as it has been shown to exhibit both anti-cancer and anti-cancer stem cell properties.

“An in silico chemical genomics approach designed to predict whether any existing drugs might be useful in tackling glioblastoma, lung and breast cancer, indicated that ivermectin may be a useful compound in this respect.”

In an [article posted](#) to his *Repurposed Drugs* Substack, physician, writer, and human rights advocate Justus R. Hope unpacked the latest science on ivermectin.

In addition to fighting viruses, bacteria, and cancer, Hope explains that ivermectin also shows unique neuroprotective benefits.

Citing the work of Dr. William Makis, Hope explains that ivermectin prevents P2X4 receptors from internalizing and overexpressing.

P2X4 expression is a driver of many neurological diseases including dementia (i.e., Alzheimer’s disease), Parkinson’s disease, multiple sclerosis (MS), chronic neuropathic pain, depression, bipolar disorder, and anxiety.

If you suffer from migraines or abuse alcohol, ivermectin may help you as well due to the same P2X4 stabilization effects that provide neuroprotective benefits.

Taking ivermectin could help to reduce cravings for and consumption of alcohol in those with an alcohol abuse disorder.

“If it is neuroprotective, and the evidence is growing that it is, and humanity is being bombarded with various toxins and electromagnetic frequencies each day that compromise our nervous system, perhaps there is reason to consider Ivermectin as a neuro-protective repurposed drug worthy of use during this dangerous time in our history,” Hope contends.

Hope believes that a growing body of evidence points to ivermectin helping to protect the nervous system from EMF damage “during this dangerous time in our history.”

“Ivermectin may not just be the anti-parasitic, anti-cancer, anti-viral repurposed drug we recognize but may have multiple other neuroprotective benefits for humanity in an era where we all may be subjected to neurotoxins – some apparent, and others invisible – like EMF,” Hope writes.

Further, cancer surgeon Dr. Kathleen Ruddy recently made the bombshell announcement that she has successfully cured several cancer patients using ivermectin, as Slay News [reported](#).

Amazingly, she revealed that every terminally ill patient who tried ivermectin made a full recovery that left doctors stunned.

Dr. Ruddy revealed that the so-called “horse dewormer” has stunned doctors by triggering dramatic recoveries in those suffering late-stage cancer.

Ruddy said the drug was tried on three patients who had exhausted all other cancer treatments.

She revealed that the patients went from their deathbeds to making a full recovery and being completely cancer-free in under a year after taking ivermectin.

She said all of the other patients had been told there was nothing more that could be and they all made amazing recoveries after taking ivermectin.

She noted that the probability of the patients recovering coincidentally while taking ivermectin was “zero”

“It’s like winning the lottery on the first three tickets you ever buy,” she explained.

Infant Deaths Surge To Record High Since Covid Vax Rollout

By Chuck Baldwin
August 8, 2024

Almost everyone notices the gigantic uptick of young, healthy adults in the prime of life falling dead. Almost everyone notices, but almost no one wants to connect the dots. Now we read the statistics regarding the record numbers of infants who are unexpectedly dying.

[Writing for SlayNews.com Frank Bergman reports:](#)

Newly released CDC data shows that death rates for American babies spiked massively in 2022.

The surge marks the first jump in infant mortality rates in twenty years.

The surge in deaths for children under the age of 1 started in 2022, the year after Covid mRNA shots were rolled out for public use.

In June 2022, the U.S. Food and Drug Administration (FDA) [expanded the approval](#) for Covid mRNA injection to be used on babies and toddlers aged 6 months to 5 years old.

According to [data](#) released by the CDC, more than 20,500 babies died in 2022 before the age of 1.

The final records show that, overall, there were 5.6 infant deaths for every 1,000 live births, a 3% increase from the year before.

Infant mortality in the US has been generally trending down since at least 1995, when consistent tracking started.

However, 2022 was the first time there was a statistically significant increase since 2002, according to the CDC's National Center for Health Statistics.

Experts are warning that any increase in infant deaths is cause for concern.

Amanda Jean Stevenson, a demographer and assistant professor of sociology at the University of Colorado Boulder, is among those raising the alarm after reviewing the CDC data.

“Infant health is one of the most important public health indicators that we have,” Stevenson [said](#).

“The fact that [infant mortality rates] are not continuing to decrease is a very big deal.

“Even flat infant mortality rates are not good.

“We need to see these numbers going down – and fast – because they are far too high.”

The CDC report makes no mention of the Covid mRNA injections which were first administered to infants in 2022.

As Slay News has [reported](#), multiple studies have now linked Covid shots to surging health complications and sudden deaths among children.

A major new study has finally confirmed the cause of soaring heart failure cases among children that are being reported all around the world.

Since early 2021, there has been a global surge in reports of children suffering heart failure and cardiac-related deaths.

The once-rare phenomenon has become almost [commonplace](#) in the post-Covid era.

As Slay News has been [reporting](#), cases of cardiac-related deaths and heart failure such as myocarditis and pericarditis have increased dramatically over the past three years.

Myocarditis and pericarditis are inflammatory conditions of the heart and are generally considered to be rare, especially among children.

Severe cases can lead to serious complications and even death.

Both conditions are [known side effects](#) of the Covid mRNA shots.

A group of prominent Canadian medical doctors and scientists has just held a press conference to warn the public about a staggering spike in child deaths.

The doctors issued an emergency warning over an “alarming 3000% increase in unexplained child deaths.”

The report above is just another reason why the Covid shots have been dubbed “death shots.”

The total number of deaths and injuries associated with the experimental Covid shots will never be fully known, mainly because the medical establishment, government and media refuse to honestly evaluate this tragic phenomenon and inform the public. All three institutions—and let’s not forget the religious and business establishments—are unwilling to accept any responsibility for the policies, edicts and mandates associated with the Covid narrative that they forced upon the public, which almost everyone now knows were based on lies.

And now we learn from the above report that the most helpless and innocent among us—our infants—have died in record numbers since the Covid vax rollout.

I seriously don’t know how so many otherwise good people can ignore the myriad injustices and nefarious activities that were perpetrated under the rubric of saving people from a flu virus.

But I do know that there are only a handful of congressmen and senators from both parties in Washington, D.C., that are NOT totally bought and paid for by AIPAC. Ditto for most state governors.

I know that most evangelical pastors and churches are living in the Old Testament and believe that Benjamin Netanyahu is King David, and the Palestinian people are Philistines (or Amalekites or Canaanites or Gergashites or Hivites or any other “ite” you want to name).

And I know that all of the major institutions in this country willingly and enthusiastically submitted to the tyranny of the Covid narrative and for three years turned the United States into a facsimile of Communist China and North Korea.

But all our national evangelical leaders can say to America is, “The Rapture is about to happen.”

But what if the “Rapture” doesn’t happen, Pastor Jeffress? Or what if the “Rapture” is 50 years away? Brother Jeffress, you’re old enough to remember hearing preachers say the “Rapture” would take place 50 years ago. What if your

eschatology is a bunch of Scofield baloney, and there is NO pre-Second Coming "Rapture?"

With or without a "Rapture," where is the call for national repentance to our members of Congress, to our President (including Donald Trump) and Vice President, to our state governors and members of our state legislatures? Where are men and women in business, medicine, education, finance, religion and journalism who have the courage to simply tell the truth?

Have you noticed that these evangelicals who are passively waiting around for the "Rapture" haven't quit their jobs? They haven't stopped buying new cars, new furniture and new houses, have they? They haven't stopped consulting with their stockbrokers about where to invest all this money that they are not going to need because the "Rapture" is about to take place, have they? Yet, as they wait around for the "Rapture," every foundational principle upon which America was built and upon which America is sustained is collapsing in front of their very eyes.

And still hardly anyone in Christian leadership has the courage to risk even the smallest things to stand up and tell the truth—the truth about the Covid narrative, the truth about Ukraine, the truth about Zionism, the truth about AIPAC, the truth about Cyrus Scofield and the "Rapture" cult he created, the truth about America's warfare state or the truth about America's plunge into spiritual idolatry.

"Why are church leaders so timid?" you ask. There are many reasons, but I believe the biggest one is a desire to make their preaching palatable and pleasing to men—even the most carnal of men. Read the preaching of the Early Church apostles and leaders in the Book of Acts. Read their sermons. Then after reading the preaching in the Book of Acts, listen to the preaching of the average pastor in America today. You'll quickly see the giant chasm that exists between the preaching in the New Testament and the preaching in modern pulpits.

In his commentary on Acts 12, [Matthew Henry](#) summed up the glaring weakness in America today in one sentence:

Those make themselves an easy prey to Satan who make it their business to please men.

If America's pastors were more concerned about telling the truth and less concerned about ingratiating themselves with the Republican Party, we wouldn't have to worry about political parties.

I tell you, folks: It's getting harder and harder to write these columns.

I'm watching my country—including the pastors and Christians in my country—embrace and endorse the genocidal mass murder of an entire people. I'm watching my country—including the pastors and Christians in my country—salivate and cheer for war (even nuclear war) with Russia. I watched my country—including the pastors and Christians in my country—enforce a medical tyranny upon its citizens that has resulted in untold damage and death, including a record number of deaths among our most innocent, precious little ones.

As I read the report above, I was reminded of the words of Christ as recorded by Dr. Luke:

It were better for him that a millstone were hanged about his neck, and he cast into the sea, than that he should offend one of these little ones. (Luke 17:2)

I wonder if, in the great universe of God's omnipotent recompense, the record number of America's infants dying in their cribs is divinely commensurate to the record number of Palestinian babies America has killed by supplying Israel with the bombs and missiles used to murder those precious little ones.

Renowned Oncologist: 'Ivermectin Destroys Turbo Cancers'

Hunter Fielding

A world-renowned oncologist has just announced that the “wonder drug” ivermectin has been found to “destroy” several different types of deadly “turbo cancers.”

An oncologist, cancer researcher, and author recently shared a study that [chemotherapy-resistant turbo cancers](#) caused by Pfizer and Moderna Covid mRNA vaccines can be overcome by ivermectin, a controversial anti-parasitic drug known to ease symptoms of viruses such as coronavirus.

Health authorities have been debunking this information and have not authorized or approved its use in humans for this purpose.

Meanwhile, dangerous, but far more profitable, mRNA “vaccines” were rushed through the approval process and pushed onto the public.

In a Substack newsletter, Dr. William Makis cited a paper from 2020 (by Juarez et al) on the antitumor effects of ivermectin at clinically feasible concentrations where it was found to support its clinical development as a repositioned cancer drug.

According to the study, at a human dose of two mg/kg, ivermectin can achieve anti-cancer effects such as cell cycle arrest (inhibit proliferation), preferential inhibition of cancer stem-like cells, synergize with several chemotherapy drugs and inhibit tumor growth in a breast cancer mouse model.

Ivermectin was tested at two mg/kg/day, translating to roughly 5uM in vitro concentration. They found that the drug goes after cancer stem cells, which tend to be resistant to chemotherapy.

“Ivermectin has a preferential depletion effect on the cancer stem-like cell population,” the authors included in the research.

“We observed that among all the evaluated cell lines, a decrease in cell viability and clonogenicity is more evident in the cancer stem-like cells than in their parental population.”

It also found that the most sensitive cancer cell lines were the ovarian, breast, glioblastoma (brain), lung, colon, uterine squamous cell carcinoma (SCC), hepatocellular, triple-negative breast cancer (TNBC), pancreatic, and endometrial.

Meanwhile, the least sensitive were osteosarcoma, gastric, and melanoma.

Moreover, lymphoma and leukemia cell lines appear to be more resistant to Ivermectin but the drug has a significant impact on those cells' ability to form colonies, according to the study.

Makis further highlighted that this was the first study he had ever seen that had tested as many as 28 cancer types with ivermectin.

"No wonder it's hidden from the public," he commented.

LANDMARK Federal Court Ruling Acknowledges Fluoride Lowers Children's IQ, Requires EPA to Take Action

BEN BARTEE

For years and years and years, the obvious claim that fluoride — a known neurotoxin — harms the nervous system was derided in corporate state media and mainstream academia as “conspiracy theory” despite it being born out in quantitative fact in the medical literature.

The serious health threat posed to everyone, but most especially children, by the known neurotoxin fluoridation, unjustifiably dumped into a huge proportion of the U.S. water supply, has been public knowledge for years for anyone willing to look.

Via Environmental Health, 2019 (emphasis added):

“After the discovery of fluoride as a caries-preventing agent in the mid-twentieth century, fluoridation of community water has become a widespread intervention, sometimes hailed as a mainstay of modern public health. However, this practice results in elevated fluoride intake and has become controversial for two reasons. First, topical fluoride application in the oral cavity appears to be a more direct and appropriate means of preventing caries. Second, systemic fluoride uptake is suspected of causing adverse effects, in particular neurotoxicity during early development. The latter is supported by experimental neurotoxicity findings and toxicokinetic evidence of fluoride passing into the brain.”

It's only now that at least one federal court has sided with the facts.

Via the United States District Court ruling (emphasis added):

“The issue before this Court is whether the Plaintiffs have established by a preponderance of the evidence that the fluoridation of drinking water at levels

typical in the United States poses an unreasonable risk of injury to health of the public within the meaning of Amended TSCA. For the reasons set forth below, the Court so finds. Specifically, the Court finds that fluoridation of water at 0.7 milligrams per liter (“mg/L”) – the level presently considered “optimal” in the United States – poses an unreasonable risk of reduced IQ in children. the Court finds there is an unreasonable risk of such injury, a risk sufficient to require the EPA to engage with a regulatory response... One thing the EPA cannot do, however, in the face of this Court’s finding, is to ignore that risk.”

Via [Fluoride Action Network](#) (emphasis added):

“After 7 years of pursuing legal action against the U.S. Environmental Protection Agency (EPA) over the risk posed to the developing brain by the practice of water fluoridation, the United States District Court of the Northern District of California has just ruled on behalf of the Fluoride Action Network and the plaintiffs in our precedent-setting court case. A U.S. federal court has now deemed fluoridation an “unreasonable risk” to the health of children, and the EPA will be forced to regulate it as such. The decision is written very strongly in our favor.”

Cheers to the Fluoride Action Network that’s been in the trenches on this case for the better part of a decade — a noble endeavor if ever there were one, and worthy of public support, financial and otherwise.

Let’s do the food supply next.

PFIZER JUST RELEASED ITS LIST OF SIDE EFFECTS OF ITS "COVID VACCINE"

Dr Stella Immanuel, MD:

See report from US House oversight committee.

<https://oversight.house.gov/.../2024.12.04-SSCP-FINAL...>

It's shocking that these congressmen are not sounding the alarm from the roof top and doing everything you can to ban the mRNA shots.

The list of some side effects of the Pfizer-Biontech Covid-19 Vaccine:

- Blood thrombosis
- Acute kidney injury
- Acute flaccid myelitis
- Positive antisperm antibodies
- Brainstem embolism
- Brainstem thrombosis
- Cardiac arrest (hundreds of cases)
- Heart failure
- Cardiac ventricular thrombosis
- Cardiogenic shock
- Central nervous system vasculitis
- Neonatal death, Deep vein thrombosis
- Brainstem encephalitis
- Hemorrhagic encephalitis
- Frontal lobe epilepsy
- Foaming at the mouth
- Epileptic psychosis
- Facial paralysis
- Fetal distress syndrome
- Gastrointestinal amyloidosis
- Hashimoto's encephalopathy
- Hepatic vascular thrombosis
- Herpes zoster reactivation
- Hepatitis Immune-mediated
- Interstitial lung disease
- Jugular vein embolism
- Juvenile myoclonic epilepsy
- Liver damage
- Low birth weight
- Multisystem inflammatory syndrome in children
- Myocarditis
- Neonatal seizure
- Pancreatitis
- Pneumonia
- Stillbirth
- Tachycardia
- Temporal lobe epilepsy
- Testic

Doctor: For the first time in my career, I've seen 8, 9, and 10-year-olds with colon cancer...

There's a terrifying trend happening right now—and most of the so-called “experts” who have let us down in every way imaginable are pretending not to see it.

So, what's happening?

Well, cancer is exploding.

And not just in adults.

Children—actually very young children—are now being diagnosed with these extremely aggressive, fast-moving cancers at a rate that's impossible to ignore. But instead of asking hard questions, the same crowd of “experts” that once shouted down anyone who dared question the COVID vaccine has gone radio silent.

Suddenly, they've lost all curiosity. Suddenly, they don't want to “follow the science.”

The timing really speaks for itself, right? These alarming cases have been ramping up since the rollout of the vaccine. But the people who once told everyone this shot was a miracle are now nowhere to be found as the world faces a medical crisis that feels more like a cover-up than a coincidence.

And now, a top doctor by the name of Dr. Patrick Soon-Shiong is finally saying what others won't...

But before diving much deeper into that important discussion, it's worth talking about a recent interview we covered—it was an explosive conversation between Dr. Patrick Soon-Shiong and Tucker Carlson. If you missed it, buckle up.

According to Dr. Soon-Shiong, both COVID and the vaccine may be fueling the terrifying global surge in cancer.

More good news is that Dr. Patrick Soon-Shiong isn't some internet rand-o with a webcam. He developed the FDA-approved cancer drug Abraxane, helped launch a national cancer moonshot, and even worked with NASA on stem cell and nanotech research.

This man is not a conspiracy theorist—and what he revealed on Tucker Carlson's show should have every American demanding answers.

According to Dr. Soon-Shiong, what we're seeing might not just be a coincidence or statistical fluke—this could be the beginning of a global epidemic of turbo cancers, and Big Pharma is doing everything it can to shut him up.

Surgeon who invented cancer drugs believes COVID vax caused 'terrifyingly aggressive' cancers...

But this latest alarm bell from Dr. Soon-Shiong still centers around the cancer surge—only now, the focus has shifted to children, which makes it all the more terrifying. For the first time in his long and respected career, he says he’s seeing kids—young kids—being diagnosed with some of the most aggressive, deadly cancers on the planet.

What is happening? It seems so obvious, doesn’t it...and as Dr. Soon-Shiong says, we have to “face reality.”

Dr. Patrick Soon-Shiong: “we have to face reality”

“For the first time in my career, I’ve seen an 8-year old, 9-year old, 10-year old with colon cancer [and] for the first time in my career, I’ve had a 13-year old child in our clinic d*e of metastatic pancreatic cancer” pic.twitter.com/f9ti8RpYu0

— Humanspective (@Humanspective) **March 27, 2025**

This is both terrifying and infuriating.

And what makes it worse is that it didn’t have to be this way. But the vaccine was forced down the world’s throat, and millions were put in impossible positions—choose the shot or lose your livelihood. Now, the fallout is becoming too serious and too widespread to ignore. Dr. Soon-Shiong isn’t the only highly respected expert sounding the alarm. More and more voices are speaking out about the rise in aggressive, fast-moving “turbo cancers.”

Slay News:

A world-renowned oncologist has called for a global ban on Covid injections and “all mRNA vaccines” after discovering that the shots are “driving” the surge in turbo cancers.

The warning was issued by Dr. Angus Dalglish, a professor of oncology at the prestigious University of London, St. George’s.

Dalglish is best known for his pioneering contributions to HIV/AIDS research.

The celebrated medical expert raised the alarm during a new interview with the Vaccine Safety Research Foundation (VSRF).

VSRF founder Steve Kirsch asked Dalglish about the potential future use of mRNA technology.

Dr. Dalglish did not hold back:

“You should never use gene therapy on anything that’s not a terminal cancer in my field...”

“The fact that mRNA can integrate, even if it doesn’t most of the time, makes it unjustifiable to use on young people, especially children.”

He continued to explain that the mRNA from Covid “vaccines” is being “incorporated” into cancer cells.

Dalglish noted that scientists have examined cancerous tumors and found traces of mRNA in the cancer.

He explains that the mRNA was “driving” the rapid growth of the tumors and the spread of these turbo cancers.

“We know [the cancer] is caused by [mRNA vaccines],” Dalglish asserted. He continues by warning that mRNA “vaccines” cannot be used to prevent cancer as they are, in fact, known to cause it.

The so-called COVID “experts” were either dangerously stupid or deeply compromised—maybe both. Was it stupidity, politics, or profit driving their decisions? Either way, the results were the same: silence in the face of a horrific health crisis that’s now targeting our most vulnerable—children. Aggressive, fast-moving cancers are rising, and we’re expected to believe it’s all just some bizarre coincidence? No. We’ve been lied to enough. It’s time to stop blindly trusting the voices that led us here and start listening to the experts who haven’t been bought off or weaponized by politics and social justice activism.

CDC Scientist Blows Whistle: Vaccines Cause Autism – ‘We Covered It Up’

Frank Bergman

A former U.S. Centers for Disease Control and Prevention (CDC) scientist has blown the whistle to warn the public that the federal government has long known that “vaccines” cause autism in children but “covered it up.”

Children’s Health Defense (CHD) recently released phone call recordings with whistleblower Dr. William Thompson, during which he confessed to the shocking cover-up.

Thompson revealed that the measles, mumps, and rubella (MMR) vaccine caused surges in autism among children under 36 months old.

According to Thompson, the CDC’s studies found that the risk of autism was dramatically increased in African American children who received the injections.

However, rather than pull the vaccine or warn the public about the risks, health officials decided to cover it up and aggressively push the vaccines.

“We covered it up,” Thompson admitted.

In 2014, Thompson released a public statement regarding internal studies confirming a link between the MMR vaccine and the development of autism.

He revealed that he had hidden “statistically significant information” uncovered during a study into links between vaccines and autism.

In part, Dr. Thompson’s statement reads:

“I regret that my coauthors and I omitted statistically significant information in our 2004 article published in the journal Pediatrics.

“The omitted data suggested that African American males who received the MMR vaccine before age 36 months were at increased risk for autism.

“Decisions were made regarding which findings to report after the data were collected, and I believe that the final study protocol was not followed.”

Thompson submitted an official complaint to the Department of Health and Human Services’ (HHS) Office of Research Integrity (ORI) in September 2014.

However, no corrective action was taken, and the public was never notified of the data hidden by the CDC.

The ORI refuses to release the relevant findings.

Meanwhile, the CDC continues to recommend the MMR vaccine for children between 12 and 18 months of age, regardless of race or sex.

Thompson provided whistleblower statements to CHD during several phone calls.

CHD recently released information from those calls, which were secretly recorded.

“We [CDC] lied. We omitted data,” Thompson admitted.

“The MMR vaccine showed an association with autism — and we covered it up.”

CHD Chief Scientific Officer, Dr. Brian Hooker, Ph.D., reviewed the CDC’s data on autism incidence and the timing of the first dose of MMR.

He found that children who received the vaccine before their third birthday have a 152% greater chance of being diagnosed with “isolated autism.”

Dr. Hooker also found that African-American boys who received their first MMR vaccine before they turned three years old had a 286% greater chance of receiving an autism diagnosis than those who received the vaccine after their third birthday.

“Dr. Thompson showed the highest level of bravery that day, and the CDC should have followed suit by changing the vaccination schedule and investigating the effect further,” said Dr. Hooker.

“This could have prevented over 100,000 cases of autism in African American boys over the ten years since Thompson’s revelation.

“Evidently, politics and pharma are much more important than children at the CDC, and the autism incidence among African Americans in the United States is now greater than that of Caucasians.”

“Ten years after the revelation that the CDC has been falsifying data regarding vaccine-induced autism causation, the agency still has said nothing publicly,” said CHD CEO Mary Holland.

“It is an outrage that, for ten years, the CDC has withheld from the public information that could prevent autism.

“They have completely abrogated their duty, and it’s time for the public to know the truth.”

Meanwhile, HHS Secretary Robert F. Kennedy Jr. is sounding the alarm over a new CDC study showing autism rates are surging among children.

Kennedy weighed in on the crisis during a press conference this week after it was revealed that the autism rate in America has exploded to 1 in 31.

“The ASD prevalence rate in 8-year-olds is now 1 in 31. Shocking,” Kennedy lamented.

“There is an extreme risk for boys.

“Overall, the risk for boys of getting an autism diagnosis in this country is now 1 in 20.

“And as high in California, which has the best data collection.

“So it probably also reflects the national trend—1 in 12.5 boys,” RFK Jr. noted.

“This is part of an unrelenting upward trend.

“The prevalence two years ago was 1 in 36.”

Kennedy was referring to alarming new data recently reported by Slay News.

The CDC has revealed that autism rates among children have skyrocketed among children, spiking dramatically each year since 2020.

A new surveillance report from the CDC's Autism and Developmental Disabilities Monitoring (ADDM) Network shows that autism rates among American 8-year-olds have just surged to the highest level ever recorded.

The prevalence of autism spectrum disorder (ASD) among U.S. children aged 8 has now reached an alarming 1 in 31 (32.2 per 1,000).

The figure marks a staggering 22% increase from 2020.

Worryingly, autism rates have skyrocketed since Covid mRNA "vaccines" were approved for use on children in 2021.

Major Study: Covid 'Vaccines' Alter Human Genetics to Trigger Deadly Cancers

Frank Bergman April 2, 2025

A major peer-reviewed study has left the establishment scientific community stunned after it confirmed that Covid mRNA "vaccines" alter the genetic structures of humans to trigger deadly cancers and autoimmune disorders.

The study was conducted by 19 of Germany's leading scientists and published in the prestigious journal *Molecular Systems Biology*.

The team of researchers found that Covid mRNA "vaccines" cause long-term changes in genetic structures that can provoke an inflammatory response.

According to the study, these genetic changes have triggered a global surge in aggressive cancers, autoimmune disorders, and deaths among the Covid-vaccinated.

The researchers said their findings account for reports of "post-vaccination inflammatory diseases" in people who received the mRNA injections.

The study shows that mRNA “vaccines” can alter human chromosomes in ways linked to leukemia and brain tumors, according to journalist [Alex Berenson](#).

This occurs when the mRNA shots “train” immune cells to sustain a [pro-inflammatory immune response](#).

In a statement responding to the bombshell study, McCullough Foundation epidemiologist [Nicolas Hulscher, MPH](#), said:

“This study adds to the large body of evidence describing potent immune dysregulating effects of mRNA injections.”

TOP DEAL FROM [PREMIUM GADGET STORE](#)

Hulscher said the study raises “serious concerns about long-term immune [homeostasis](#) and the potential for chronic inflammatory disease, autoimmune sequelae, and even [oncogenic processes](#).”

Unfortunately, some experts warn that the findings of the study are not surprising.

According to immunologist and biochemist [Jessica Rose, Ph.D.](#), the study confirms what is already known about the dangers of mRNA “vaccines.”

“Repeat injection leads to a boatload of immunological modifications,” Rose said.

Renowned Virologist Warns Fully Vaxxed Have Just Years Left to Live: 'Tsunami of Death Is Upon Us'

- By Bradley Greer

Belgian virologist Dr. Geert Vanden Bossche sounded the alarm over a looming collapse of immunity among the fully vaccinated, resulting in widespread global turbo cancer, heart attacks, strokes, and ultimately [death](#).

The mass deaths, which Bossche describes as a “*massive, massive tsunami*,” will be a result of compromised immune systems among those who received the [COVID-19](#) vaccine.

The incoming mass deaths will not only overwhelm hospitals; it will destroy the economy and thus cause social chaos.

Bossche, the spike in so-called “long COVID” – a term created by Big Pharma to cover up [vaccine](#) injury – will begin to become more [noticeable](#) this year.

“You will see what will happen, for example, in the next coming weeks ... is more and more cases of more serious long COVID,” Bossche said.

“They will start to replace the surge of the cancers ... now we have a more chronic phase.”

“It will end with a hyper-acute phase, a huge, huge wave ... I’ve been studying this now for four years. I know what I’m talking about.”

“We will have to build a completely new world,” Bossche says

Bossche, who understands he is the only one who knows the immunology behind all this, predicts an “imminent” health crisis beyond what *the world has ever seen*.

The mass deaths will result in a total failure of the system, which Bossche warns that “a completely new world” will emerge – the elite’s “great reset.”

“It is very, very clear that when this starts, our hospitals will collapse,” Bossche warned.

“And that means the chaos in all kinds of layers of society – financial, economic, social, you name it – will be complete.”

COVID was the first of many dominoes that would destroy the current world order, and a *new world order* would emerge.

"It's very strange for me to make such statements, but I'm not hiding it because I'm 200 percent convinced that it will happen," Bossche stated ominously.

"You commit errors or even crimes at the very small scale, you can hide them – I've seen this happen with the Ebola vaccination with Africa a number of years ago."

"However, if you do this at the very large scale, like what has happened with this mass (COVID) vaccination campaign, the truth will surface."

The mass genocide event is not happening in a few years; it's happening now.

"If these people would now go out and say, 'Yeah, wait a minute, we have been making some mistakes, it wasn't all right, we have to correct them, we have to revise our opinion,' these people will be stoned in the streets," Bossche added.

"They can only hope that something will happen that will distract from this issue, but it won't."

So after they took the guns, and the knives, they took their freedom of speech:

Yeah, Americans really want to go the way of the "smart" gun control laws.

DNA Testing Kits Are a Scam To Develop Ethnic-Specific Bioweapons

By Ethan Huff

Natural News

Lawmakers who attended the recent Aspen Security Forum warned that DNA testing services to identify ancestry could be fronts to harvest information for ethnicity-tailored bioweapons programs.

U.S. Rep. Jason Crow (D-Colo.), a member of the House Intelligence Committee, is one such lawmaker who says there are already bioweapons programs currently in development that are "designed to target specific people," and that this would not have been possible if not for DNA testing services.

"That's what this is, where you can actually take someone's DNA, take their medical profile, and you can target a biological weapon that will kill that person or take them off the battlefield or make them inoperable," Crow stated.

Since personal data privacy pretty much went out the window ever since the 9/11 terrorist attacks, young people today have "very little expectation of privacy," which explains why many of them are eager to participate in data mining fronts like 23andMe

"People will very rapidly spit into a cup and send it to 23andMe and get really interesting data about their background," Crow said. "And guess what? Their DNA is now owned by a private company. It can be sold off with very little intellectual property protection or privacy protection."

Pentagon a major player in DNA harvesting and biological weapons development programs

Crow wants the United States to create a new set of guidelines for the protection of personal health data because in his view, "that data is actually going to be procured and collected by our adversaries for the development of these systems."

Russian President Vladimir Putin agrees, having stated back in 2017 that biological samples were being harvested "purposefully and professionally" all over Russia by various non-governmental organizations (NGOs) and other groups for unknown purposes.

The Pentagon (Pentagram), meanwhile, is actively collecting DNA and using it to develop biological weapons, which is exactly what Putin is worried about – and could be one of the reasons why Putin invaded Ukraine and is now challenging the Western globalist matrix of control.

Lieutenant-General Igor Kirillov, head of the Russian Radiation, Chemical and Biological Protection Force, announced back in May that the Pentagon has "significantly expanded its research potential not only in the field of creating biological weapons, but also obtaining information about antibiotic resistance

and the presence of antibodies to certain diseases in populations of specific regions.”

The Pentagon is also involved, Russia says, in funding and developing biolaboratories throughout Ukraine, having poured some \$224 million into the country for such purposes between 2005 and early 2022.

After initially denying the existence of these biolabs, the globalist controllers of the United States now admit that there are, in fact, 46 biological research facilities littering the Ukrainian landscape, but that they are supposedly being used for a “peaceful public health project.”

Anyone who says otherwise, insist U.S. officials, is “spreading disinformation and sowing mistrust.” Such disinformation spreaders include Russia, China and other enemies of the U.S. military-industrial complex.

Sen. Joni Ernst (R-Iowa) is in agreement with Crow that customized bioweapons made from harvested DNA are a threat. A member of the Senate’s Subcommittee on Emerging Threats and Capabilities and Armed Services Committee, Ernst says such bioweapons could be used to target livestock and crops throughout America.

“There’s a number of ways we can look at biological weapons and the need to make sure not only are we securing human beings, but then also the food that will sustain us,” she is quoted as saying.

U.S. legislators are particularly concerned about genetically engineered (GMO) crops, which China and other countries could target for destruction – which could actually be a good thing for Americans.

2 Dead After Breaking Into Wrong Home, Meeting Teen Rambo Who Took No Prisoners

Trent Walker

A young Kentucky resident was more than a match for two men who broke into a home on Saturday.

Shortly before 4:30 a.m. on Saturday, Kentucky State Police were informed of a shooting that took place in Manchester after the Manchester Police Department wanted assistance, according to a news release from the Kentucky State Police.

The news release said two men forced their way into a home and were seeking to steal guns from a safe.

“During the break-in, a juvenile resident of the home discovered the intruders and saw them holding firearms,” the release said.

“The juvenile, acting in self-defense, retrieved a handgun and shot both men before escaping through a bedroom window,” the release said.

The dead men were identified as Roger Smith 44 of McKee, who died at a nearby hospital, and Jeffrey Allen 51 of Manchester, who died at the scene.

Manchester Police Chief Jeff Couch told NBC that no one else was at home at the time of the incident.

Couch said the gun belonged to the father of the teen who fought back.

The teen was not taken into custody, he said.

Police did not say how old the juvenile was who killed the would-be robbers, according to WSAZ-TV.

Across America, homeowners rely upon the Second Amendment for protection, as noted by Amy Swearer in an Op-Ed for the Heritage Foundation.

“The right to keep and bear arms is based on the natural, immutable right to defend oneself and one’s liberties from crime and tyranny,” she wrote.

“Unfortunately, too many well-intentioned people today advocate severely restricting the ability of law-abiding Americans to defend themselves and others with the most effective firearms.

“They believe that Americans rarely use firearms to protect their rights and liberties, and they think commonly proposed gun control laws will meaningfully address gun-related violence. But the reality is quite different,” she wrote.

Trapping Wild Pigs And People!

by [Jeff Thomas](#)

Most of us would like to assume that we're smarter than pigs, but are we? Let's have a look.

Pigs are pretty intelligent mammals, and forest-dwelling wild pigs are known to be especially wily.

However, there's a traditional method for trapping them.

First, find a small clearing in the forest and put some corn on the ground.

After you leave, the pigs will find it. They'll also return the next day to see if there's more.

Replace the corn every day. Once they've become dependent on the free food, erect a section of fence down one side of the clearing. When they get used to the fence, they'll begin to eat the corn again. Then you erect another side of the fence.

Continue until you have all four sides of the fence up, with a gate in the final side.

Then, when the pigs enter the pen to feed, you close the gate.

At first, the pigs will run around, trying to escape. But if you toss in more corn, they'll eventually calm down and go back to eating.

You can then smile at the herd of pigs you've caught and say to yourself that this is why humans are smarter than pigs.

But unfortunately, that's not always so.

In fact, the description above is the essence of trapping humans into collectivism.

Collectivism begins when a government starts offering free stuff to the population. At first, it's something simple like free education or food stamps for the poor.

But soon, political leaders talk increasingly of "entitlements" – a wonderful concept that by its very name suggests that this is something that's owed to you, and if other politicians don't support the idea, then they're denying you your *rights*.

Once the idea of free stuff has become the norm and, more importantly, when the populace has come to depend upon it as a significant part of their "diet," more free stuff is offered.

It matters little whether the new entitlements are welfare, healthcare, free college, or a guaranteed basic wage. What's important is that the herd come to rely on the entitlements.

Then, it's time to erect the fence.

Naturally, in order to expand the volume of free stuff, greater taxation will be required. And of course, some rights will have to be sacrificed.

And just like the pigs, all that's really necessary to get humans to comply is to make the increase in fencing gradual. People focus more on the corn than the fence.

Once they're substantially dependent, it's time to shut the gate.

What this looks like in collectivism is that new restrictions come into play that restrict freedoms.

You may be told that you cannot expatriate without paying a large penalty. You may be told that your bank deposit may be confiscated in an emergency situation. You may even be told that the government has the right to deny you the freedom to congregate, or even to go to work, for whatever trumped-up reason.

And of course, that's the point at which the pigs run around, hoping to escape the new restrictions. But more entitlements are offered, and in the end, the entitlements are accepted as being more valuable than the freedom of self-determination.

Even at this point, most people will remain compliant. But there's a final stage: The corn ration is "temporarily" cut due to fiscal problems. Then it's cut again... and again.

The freedoms are gone for good and the entitlements are then slowly removed. This is how it's possible to begin with a very prosperous country, such as Argentina, Venezuela or the US, and convert it into an impoverished collectivist state. It's a gradual process and the pattern plays out the same way time and again. It succeeds because human nature remains the same.

Collectivism eventually degrades into uniform poverty for 95% of the population, with a small elite who live like kings.

After World War II, the Western world was flying high. There was tremendous prosperity and opportunity for everyone. The system was not totally free market, but enough so that anyone who wished to work hard and take responsibility for himself had the opportunity to prosper.

But very early – in the 1960s – *The Great Society* became the byword for government-provided largesse for all those who were in need – free stuff for those who were disadvantaged in one way or another.

Most Americans, who were then flush with prosperity, were only too happy to share with those who were less fortunate. Unfortunately, they got suckered into the idea that, rather than give voluntarily on an individual basis, they'd entrust their government to become the distributor of largesse, and to pay for it through taxation. Big mistake.

From that point on, all that was necessary was to keep redefining who was disadvantaged and to then provide more free stuff.

Few people were aware that the first sections of fence were being erected.

But today, it may be easier to understand that the fence has been completed and the gate is closing. It may still be possible to make a hasty exit, but we shall find very few people dashing for the gate. After all, to expatriate to another country would mean leaving all that free stuff – all that security.

At this point, the idea of foraging in the forest looks doubtful. Those who have forgotten how to rely on themselves will understandably fear making an exit. They'll not only have to change their dependency habits; they'll have to think for themselves in future.

But make no mistake about it – what we're witnessing today in what was formerly the Free World is a transition into collectivism. It will be a combination of corporatism and socialism, with the remnants of capitalism. The overall will be collectivism.

The gate is closing, and as stated above, some members of the herd will cause a fuss as they watch the gate closing. There will be some confusion and civil unrest, but in the end, the great majority will settle down once again to their corn.

Only a few will have both the insight and temerity necessary to [make a dash for the gate as it's now closing](#).

This was true in Argentina when the government was still generous with the largesse, and it was true in Venezuela when the entitlements were at their peak. It is now true of the US as the final transition into collectivism begins.

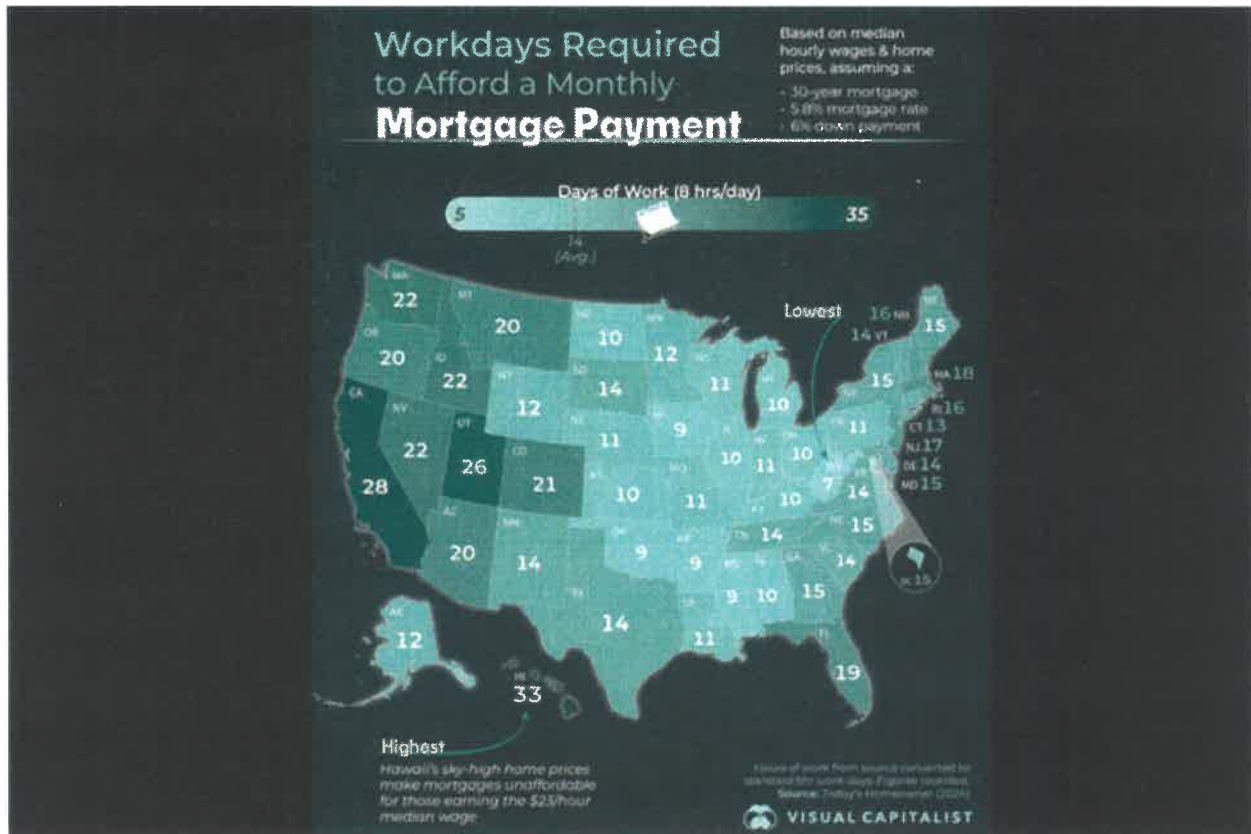

Rather than make the dash for the gate, the great majority will instead look down at their feed and say, "This is still the best country in the world," and continue eating the corn.

Editor's Note: Disturbing economic, political, and social trends are already in motion and now accelerating at breathtaking speed.

The risks that lie ahead are too big and dangerous to ignore.

That's exactly why bestselling author Doug Casey and his team [just released a free report](#) with all the details on how to survive an economic collapse.

It will help you understand what is unfolding right before our eyes and what you should do so you don't get caught in the crosshairs.

'That's What We're Here For, To Help People': Police Officer's Good Deed Caught On Camera

March 4, 2025

Today's good news story comes from Georgetown, Kentucky.

A small gesture of kindness from a Georgetown police officer is spreading positivity beyond his local community, thanks to a heartwarming video shared on social media.

Officer Rodney Johnson was on routine patrol Friday when he noticed traffic slowing down on Paris Pike. Upon investigating, he saw a woman in a wheelchair struggling to get home. Without hesitation, he parked his cruiser, turned on his lights, and stepped in to help—gently wheeling her down the street as traffic waited.

For Johnson, it was just another day of serving his community.

“It was just instinct. That’s what we’re here for—to help people,” [he shared](#). What he didn’t realize was that a passerby had captured the moment on video. The footage was later sent to the Georgetown Police Department, which posted it on Facebook.

The video has since gained over 1,300 views, with countless people praising Johnson for his selfless act.

“We’re out here doing a job, you know, trying to help people as much as we can, and then you know, to have that much love and respect to come from the public saying that. It’s very humbling,” said Johnson. “That’s what we do. We serve and protect the community. We help people that need to be helped and sometimes when people can’t help themselves, we step in and we provide that help that they need.”

The Georgetown Police Department expressed their pride in Johnson’s actions, calling it a true example of going above and beyond. His kindness serves as a reminder that doing the right thing—even when no one is watching—can make a world of difference.

Cafe Owner Helps Homeless Veteran, Community Rallies To Change His Life

February 26, 2025

Today's good news story comes from Woodhaven, Michigan.

A simple [act of kindness](#) by a Michigan café owner has transformed the life of a homeless veteran—and inspired an entire community to step in and help.

Bridget Watson, the owner of Cafe Sweets, first met Don, a homeless Army veteran, when he stopped by her café looking for cans and bottles to return for money. She quickly learned more about him—his past work as a trucker, his love for dogs and plants, and the struggles he faced, including ongoing health issues and homelessness.

Determined to help, Watson initially offered to hire Don, but his health made it impossible. Instead, she found another way. She paid for a motel stay and turned to social media to rally support. The response was overwhelming.

“Somebody donated their winter coat, which was a hunting coat, hats, gloves, scarves, masks, hygiene stuff,” Watson told [Fox 2 News](#). “Everyone has stepped in.”

One generous local even offered Don an apartment for just \$50 a month, and another person volunteered to cover the rent for the rest of the year.

“He’s beyond grateful,” Watson said. “He doesn’t ask for much—just Pepsi and Folgers instant coffee.”

This inspiring story is a testament to the power of community and compassion. Watson’s kindness set off a ripple effect, proving that small gestures can lead to life-changing outcomes.

MAY 2025 SALE

Your gut plays a vital role in digestion, immune function and mineral and vitamin absorption. Unfortunately, factors like stress, malnutrition, medications and more can disrupt the gut microbiome, leading to a slew of digestive issues and GI diseases. Thank goodness that nature provides us with tons of powerful herbs that can help support and heal gut issues.

Superior Oregano Oil

Oregano is a powerful herb that offers many health benefits, particularly for your GI tract. It contains compounds with potent antimicrobial properties and that's great news as it can help combat harmful parasites and bacteria from the gut. Because it has a high antioxidant content, oregano can also help neutralize harmful free radicals that lead to cell damage, and they disrupt the gut barrier. By reducing oxidative stress, oregano can protect the gut from cellular damage. This is a liquid and it is suggested to take water in the mouth first and then put the oil into your mouth with the water and then swallow.

Superior Turmeric Root Capsules

It is renowned for its potential anti-inflammatory, antioxidant, and other properties, which are particularly relevant in the context of digestive health, and it even has the potential to stimulate bile production, aiding digestion and reducing gut inflammation. It may also help improve gut microbiota balance and potentially benefit conditions like irritable bowel syndrome (IBS). It's suggested to take 3-4 capsules per day.

Superior Turkey Tail Mushroom Tincture

Turkey tail mushroom is beneficial for gut health because it acts as a prebiotic, nourishing the good bacteria in the gut microbiome. It also contains fiber and other compounds that support healthy digestion and balance the gut's bacterial ecosystem. Turkey tail mushrooms contain polysaccharides, including PSP and PSK, which act as prebiotics and This can lead to a more diverse and balanced gut microbiome, which is linked to overall health and well-being. Turkey tail mushrooms are rich in antioxidants and other compounds that may support gut health and reduce inflammation.

Mountain Morning Mushroom Blend

This is a special product because it contains 5 immune boosting, gut supporting, tumor reducing, brain stimulating mushrooms (cordyceps, reish, turkey tail, chaga and lion's mane) that help everyone start their morning off right. Simply scoop out the powder, pour it into a cup filled with hot water (add creamer if you'd like) and enjoy the health and live saving benefits of this powerful coffee "replacement" (does NOT contain coffee or caffeine and has an earthy/nutty/cocoa flavor). This product has been a game changer for so many of our clients who suffer from poor gut health such as nausea, bloating, poor digestion and more. Try it for yourself!
